Install behind existing switch

Customized scene selection

Control with existing switch

8719514318045

## Easy smart lighting

Installed behind light switches, the Philips Hue wall switch module lets you use existing switches with Philips Hue smart lights. Your lights stay powered and you can use the switch to set multiple scenes on an individual light or in a room

### **Always connected to power**

- Ensures your smart lights are always connected to power

### **Personal scene setting**

- Control lights, Rooms, or Zones
- Cycle through scenes by toggling the light switch

### **Full control from smart device with Hue bridge**

- Hue Bridge required

# Highlights

## Ensures your smart lights

Never let your smart lights become “unreachable” when someone uses the standard light switch to turn off the lights. With the wall switch module, your lights are always connected to power.

## Control lights, Rooms, or Zone

Use your existing light switch to control the smart lights in a Room or Zone. Simply set up the wall switch module with the lights you'd like it to control in the Hue app.

## Change scenes with switch

Use your switch to set up to three different light scenes — just toggle the switch on and off to cycle through the scenes you choose.

## Hue Bridge required

The Philips Hue wall switch module requires a Hue Bridge (sold separately). The Hue Bridge also allows you to add up to 50 lights and 12 accessories throughout your entire home, create timers and routines, and control your lights from anywhere — inside or outside your home — with the Hue app.

# Specifications

## The bulb

Fitting: No fitting  
 Input voltage: 220V-240V  
 Lumen output: 0  
 Length: 10 mm  
 Height: 43 mm  
 Width: 38 mm  
 Energy efficiency label: n/a

## Environmental

Operational humidity: 0%<lt>H</>80% (non condensing)
